orrect initiation codon. Where possible we choose an initiatic codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the
                                                                                                                                                                                                                                                                            The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. Where these have been used to deduce the initiation codon. Genewhere these have been used to deduce the initiation codon. Genewhere the sequences are given the sequences are given where these have been used to deduce the initiation codon. Genewhere the sequences are given the sequences are given where the sequences are given the sequences.

It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid 2E1 lies between 7A1 and 6A9 on the AseI-B genomic restriction fragment.
                                                         /notee SC2E1.03, ffh, signal recognition particle protein, len: 550 aa; highly similar to mnay e.g. SR54_ECOLI (453 aa), fatsa scores; opt: 1465 z-score: 1282.8 E(): 0, 50.0% identity in 458 aa overlap. Contains PS00017
ATP/GTP-binding site motif A (P-loop), PS000300 SRP54-type proteins GTP-binding domain signature and Pfam match to entry SRP54 PF00448, SRP54-type proteins, score 66.57: Similarities suggest possible start site at aa 35".

                                                                                                                                                                                                                               //ortes SC2EL.14, sip2, probable signal peptidase I, len:
//ortes SC2EL.14, sip2, probable signal peptidase I,
446 aa; similar to many e.g. LEP_HARIN signal peptidase I
(EC 3.4.21.89) (349 aa), fasta scores; opt: 151, z-score:
317.3 E(): 1.9e-10, 30.1% identity in 286 aa overlap.
Contains PS00761 Signal peptidases I signature 3, Pfam
match to entry signal peptidases I signal peptidases I,
score 42.41 and probable transmembrane domain. Also
similar to surrounding genes sip1 (E(): 9.7e-24, 44.9%
identity in 274 aa overlap), sip3 (E(): 1.8e-28, 56.3%
identity in 245 aa overlap), and sip4 (E(): 1.1e-09, 35.9%
identity in 233 aa overlap). Note that after aa 325 the
ORF overlaps the downstream sip3 gene SC2E1.15, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      //note="P501015 Ribosomal protein L19 signature"

                                                                                                                                                                                                                                                                                                                                 /note="SC2E1.41, rpsB, 30S ribosomal protein S2, len: 310
aa; almost identical to RS2_STRCO 30S ribosomal protein S2
(242 aa), E(): 0, 96.7% identity in 242 aa overlap and
also highly similar to many others e.g. RS2_ECOLI 30S
ribosomal protein S2 (240 aa), fasta scores; opt: 744
z-score: 950.7 E(): 0, 50.4% identity in 224 aa overlap.
Contains PS00962 Ribosomal protein S2 signature (probably a
false positive). Also contains family signature (probably a
false positive). Also contains fam matches to entry S2
PF00318, Ribosomal protein S2, score 304.89 and to entry
60s_ribosomal protein S2, score 304.89 and to entry
24.36. Note that this sequence is longer than RS2_STRCO
due to a sequence difference around 235 aa. This sequence
has a C-terminal extension not present in other rpsB. The
M. tuberculosis protein also has a C-terminal extension
but with a differentsequence. Our sequence has been
checked, and is also confirmed by sequence from the

correct initiation codon. Where possible we choose an initiation rodon (atg, gtg, ttg or (att)) which is preceded by an upstream initiation codon). If this cannot be identified we choose the upstream initiation codon). If this cannot be identified we choose the most initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Generally the sequence of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon of the codon 
                                                                                                                                                                                                                                                                                                                      prediction is based on positional base preference in codons using specially developed Hidden Markov Model (Krogh et al., Nucleic of Bibb et al., Gene 30:157-66(1984) and the FramePlot program http://www.nih.go.jp/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Details of S. coelicolor sequencing at the Sanger Centre are available on the World Wide Web.

(URL; http://www.sanger.ac.uk/Projects/S_coelicolor/) CDS are numbered using the following system eg SC7B7.01c. SC (S. coelicolor), 7B7 (cosmid name), .01 (first CDS), c (complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TGCAAAAGCAGCCCGCGCCTGCAAGAGGACAGTGCTCGACGACTGTGGCTGCTGCCGAGTG 165

Contains PS00017 ATP/GTP-binding site motif A (P-loop), PS00300 SRP54-type proteins GTP-binding domain signature and Pfam match to entry SRP54 PF00448, SRP54-type proteins, score 66.57. Similarities suggest possible start site at aa 35".
                                                                                                                                                                                                                                                                                                                                                               2735. .4387

```
TR:E1228248 (EMBL:Y09474) signal peptidase I (291 aa), fasta scores; opt: 1997 z-score: 2287.4 E(): 0, 99.7% identity in 291 aa overlap, and similar to many others e.g. LEP_PHOLA signal peptidase I (EC 3.4.21.89) (203 aa), fasta scores; opt:222 z-score: 404.9 E(): 2.6e-15, 37.9% identity in 232 aa overlap. Contains PS00761 Signal peptidases I signature 3, 2x Pfam match to entry signal_pept_I PF00461, Signal peptidases I, scores 48.83 and 46.79 and probable transmembrane domain. Also similar to surrounding genes sip1 (E(): 7.6e-20, 35.8 identity in 264 aa overlap) and sip4 (E(): 6.6e-15, 36.3% identity in 245 aa overlap). Note that a more upstream start was chosen due to positional base preference"

(EMBL:U58281) tetR homologue whiR (179 aa) (86.6% identity
in 179 aa overlap) and similar to several putative
transcriptional regulators of the tetR family e.g.
TR:E1247678 putative transcriptional regulator SC10A5.11
(S.coelicolor) (198 aa), fasta scores; opt: 434 z-score:
720.5 E(): 6.8e-33, 41.5% identity in 171 aa overlap.
Contains probable helix-turn-helix motif at aa 29 to 50
(Score 1618, +4 70 SD) and Pfam match to entry tetR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                           /note="SC2E1.41, rpsB, 30S ribosomal protein S2, len: 310
aa; almost identical to RS2_STRCO 30S ribosomal protein S2
(242 aa), E(): 0, 96.7% identity in 242 aa overlap and
also highly similar to many others e.g. RS2_ECCLI 30S
ribosomal protein S2 (240 aa), fasta scores; opt: 744
z-score: 950.7 E(): 0, 50.4% identity in 224 aa overlap.
Contains pS00962 Ribosomal protein S2 signature 1 and
pS00211 ABC transporters family signature (probably a
false pssitive). Also contains Pfam matches to entry S2
pF00318, Ribosomal protein S2, score 304.89 and to entry
60s_ribosomal pF00428, 60s Acidic ribosomal protein, score
24.36. Note that this sequence is longer than RS2_STRCO
due to a sequence difference around 235 aa. This sequence
has a C-terminal extension not present in other rpsB. The
M. tuberculosis protein also has a C-terminal extension
but with a differentsequence. Our sequence has been
checked, and is also confirmed by sequence from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /gene="rpsB"
